

Recursioncost.java

from main method we have
arr { 10, 20 }

static long factorial
initially calls = 0

if $n = 10$

$10 \leq 1$ ✗ no execute

~~return~~

return

$10 * \text{fac}(10-1)$

$10 * \text{fac}(9)$

↓

↓

factorial(8)

↓
factorial(7)

factorial(6)

factorial(5)

4

3

2

1

after that calls = 1

$1 \leq 1$ ✓

it return 1

execution stop.

same as for 20

$20 \leq 1$ ✗

return $20 * \text{factorial}(20-1)$
